# ANALYTICS ENHANCEMENT STRATEGY (2013)

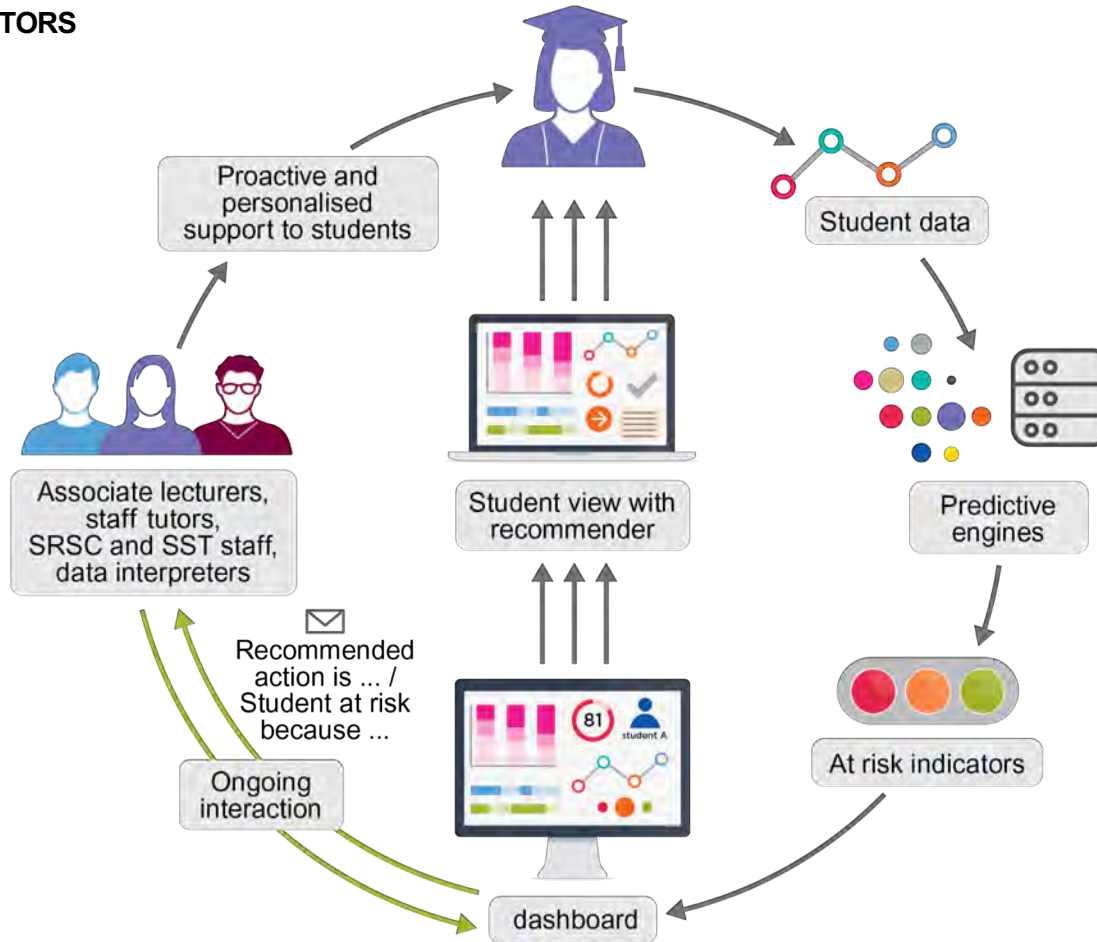

# Plot your institution in terms of maturity of data provision and literacy of your users

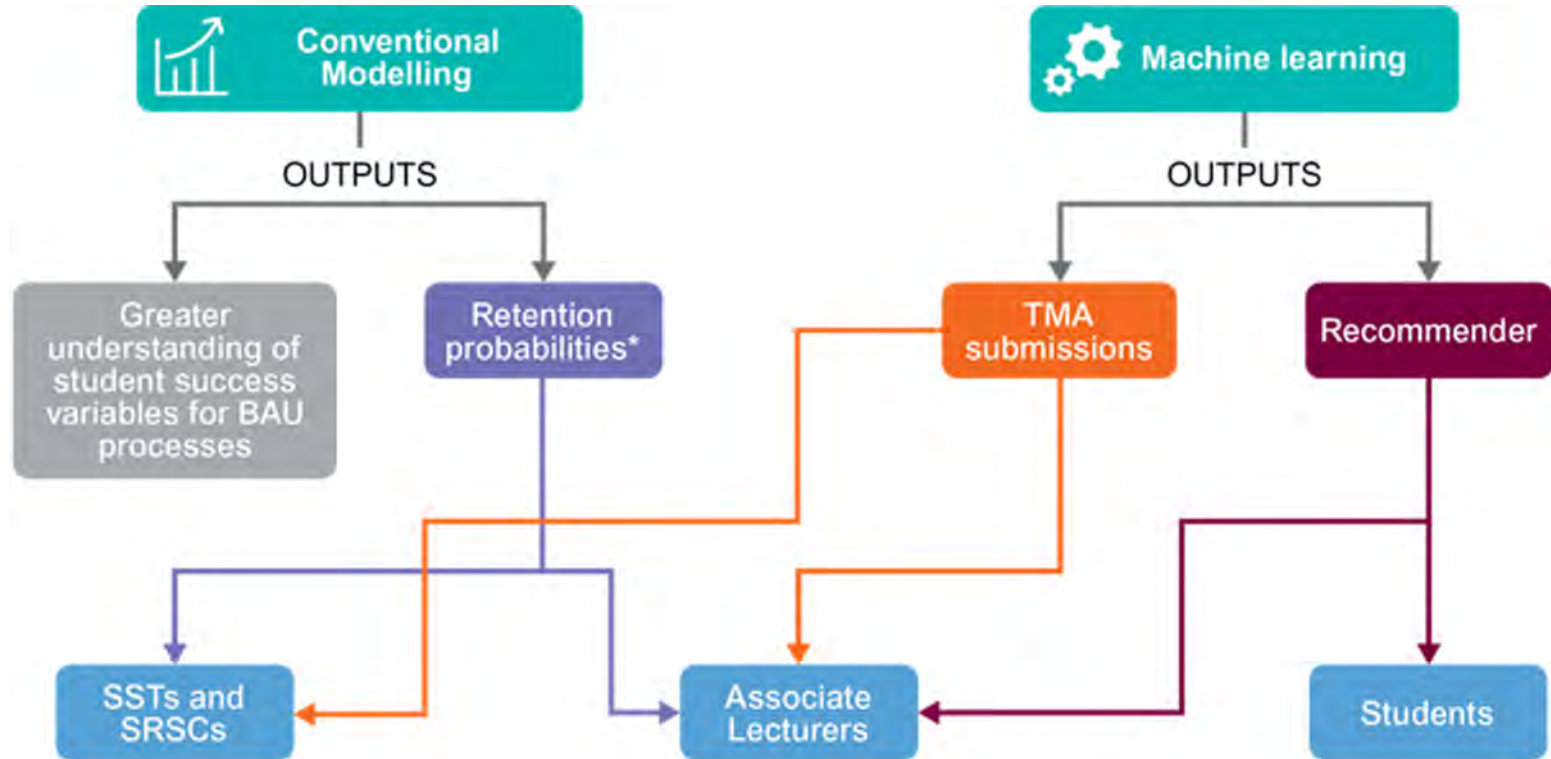

## THE VISION

### EARLY ALERT INDICATORS

## PREDICTIVE ANALYTICS AT THE OPEN UNIVERSITY

### Approaches to generating predictions

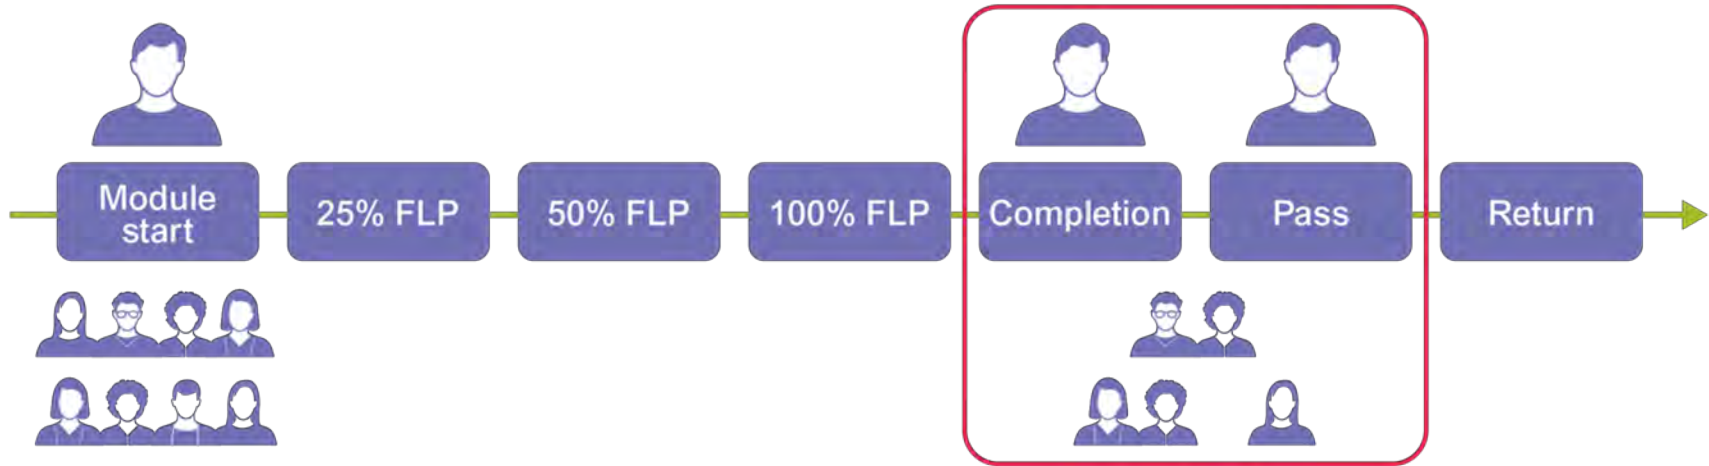

\*Student probabilities generated for the various milestones including completion, pass and return

\*\* e.g. Pass rates model generating explanatory factors

## STUDENT PROBABILITIES

What are they?

For an individual **undergraduate** student it is the **likelihood** (probability) of them still being present at each milestone?

For a module cohort:

- How **many** students are likely to still be present at each milestone?

## IDENTIFYING STRUGGLING STUDENTS – A TUTOR GROUP EXAMPLE

Based on an email from a tutor regarding a tutor group with a October 2017 (Feb 2018)

Out of seventeen students, only four were deemed 'on track', with further two a 'maybe'. The rest were either already withdrawn or were not engaged.

Could we have seen this from the student data?

Submitted up to TMA2, but "had personal problems and was going to discontinue studies for the time being"

Probability to pass - 46%-47%

Withdrawn

Probability to pass - 4%-26%

Probability to pass - 83%-94%

## STUDENT PROBABILITIES – PATTERNS

### Story of a Tutor Group

18 Aug 17  
(registered)

23 Oct 17  
(25% FLP)

31 Dec 17  
(50% FLP)

31 Mar 18  
(100% FLP)

### Top factors

study history (C), workload, module, qualification, demographics (N)

+ VLE visits

+ TMA submissions and score

+ VLE and TMAs updated

### CONCLUSIONS:

- A student's performance can be anticipated even before module start
- In the vast majority of cases, students with low probabilities end up withdrawing from the module
- Students who are consistently on 'green' are generally doing well and are well engaged
- 'At risk' status can happen at any stage of the module
