

GAIN EXPERIENCE WITH INTEGRATION IN THE FLEXIBLE AND PERSONAL LEARNING ENVIRONMENT

A PILOT ENVIRONMENT FOR LECTURERS, IT PROFESSIONALS AND SUPPLIERS

To help institutions develop a flexible and personal learning environment consisting of an integrated set of applications, SURF has developed a pilot environment. Read the infographic to learn about this pilot environment and what it can do for you.

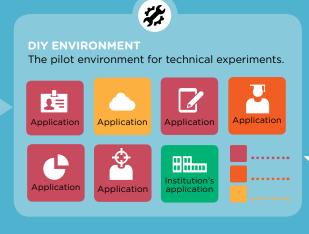

- What is the added value of a modular learning environment for my educational activities?

 How does a modular learning environment.
- How does a modular learning environment contribute to the educational innovation objectives of my institution?

SURF offers a customised learning environment in the cloud. SURF also supports lecturers and educational professionals who want to try working with an integrated set of tools in this learning environment.

- How can I as an IT professional access an assessment application from within a learning environment and display the results on the student's personal page?
- How do I integrate the student information system into my institution's learning environment?

SURF provides an environment that allows institution's IT professionals to set up a modular learning environment themselves and investigate integration between applications. SURF also offers assistance with this.

- What exactly is a modular learning environment?
- What standards must my application comply with in order to be compatible with a modular learning environment?

SURF's demo environment provides insight into how a modular learning environment works. Suppliers can use the demo environment as a standards tester to find out whether the integration of their tools actually works.
