# Dilemma: Deployment of ChatGPT Detection Tool

## Situation:

ChatGPT has been in the news a lot. Students can use this AI tool to complete their homework assignments. And, thereby possibly defrauding them. Now an educational institution has found a supplier of a product that detects if there's fraud from using ChatGPT.

However, 10% of the 'fraud' reports this tool finds are unjustified and are cases where the student did not use ChatGPT.

## Decision:

The institution is still going into business with the vendor of this ChatGPT detection software.
