

# Dilemma: Marketplace

## Situation:

Collaborating with businesses is important for your institution. Students do internships with these businesses and graduate from there. A free commercial online marketplace is offering to match these internship opportunities for students.

Control of student data on this marketplace is under the control of the (commercial) provider. Students have to share a lot of data, such as date of birth, gender and hobbies. Other institutions are already participating.

## Decision:

Your educational institution intends to use this marketplace for students. Do you

agree or disagree?
