

## Values Compass – The Game

# Dilemma: Smartwatches

### Situation:

Smartwatches today can track the health of the wearer. A special education teacher wants to give every student a smartwatch. On a dashboard, the teacher will receive signals coming from the students' smartwatches, including early alerts in case of major abnormalities.

For example, the teacher knows when a student has a rising and very high heart rate. The teacher can then respond to a situation before it escalates in the classroom. This should benefit the learning climate of the whole class.

### Decision:

The teacher sees the added value of the smartwatches for both the individual student and the class as a whole: less time spent on escalations, more time for lessons. The teacher will deploy the smartwatches. Do you

agree or disagree?
