

Dilemma: Teaching Materials for TikTok

Situation:

A teacher's students are on TikTok, which they mostly use to share videos with each other (such as dance videos). The teacher wants to connect with the students' experiences. TikTok has three million users in the Netherlands, of which just over half are active daily.

TikTok users interact a lot with each other, something the teacher does not see on other platforms provided by his educational institution. Encouraging exercise and creativity on the platform are also motivating. TikTok is from a Chinese company. There are general concerns about who has access to users' data and what the company behind TikTok does with that data, now and in the future.

Decision:

The teacher is going to create teaching materials specifically for TikTok. Do you

agree or disagree?
